Dick 9/25/89

The 2 mg issue is marked on page 2 and the reporting of results on page 14. Does this mean that we advertise our brands at 2mg or continue at 1mg as the current practice.

The plan for this method (1 of 4) is "to have it approved by the CORESTA Scientific Commission in October and also by the CORESTA Council in October. The methods would then be given to ISO with the suggestion that they be adopted as ISO Draft determinimal standards.

I will be back in contact with you after you have had a chance to get an opinion.

Thanks for your help.

Dick

File note: RAISED this with Dr. Bowden Sept. 28, 1989 who said he had already spoken with Dick Cox + there was no problem here.
